Art Unit: 2852

#### **DETAILED ACTION**

#### Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 1-24-2005 was considered by the examiner.

#### **Drawings**

3. The content of the drawings are approved by the examiner.

#### Title

4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Application/Control Number: 10/822,004 Page 3

Art Unit: 2852

6. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Sameshima et al. (6,807,393). Sameshima teaches an electrophotographic printer comprising a main frame; a photosensitive drum unit vertically detachably installed on the main frame, and having a photosensitive drum on which an electrostatic latent image is formed; and an intermediate transfer unit vertically detachably installed on the main frame, and having a transfer belt to which a toner image is transferred from the photosensitive drum, wherein the intermediate transfer unit is installed above the photosensitive drum unit (figure 1, 8). The photosensitive drum unit further comprises a first cleaning device 6 to remove toner remaining on a surface of the photosensitive drum 1 after the toner image is transferred to the transfer belt. The photosensitive drum unit further comprises a charger 2 to charge the photosensitive drum to a uniform potential. The intermediate transfer unit further comprises a second cleaning device to remove toner remaining on the transfer belt 5 before the toner image is transferred to the sheet.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 2852

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 14-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sameshima et al. in view of Hamano et al. Sameshima et al. teaches a duplex path and that the sheet transport is rotatably installed. Sameshima et al. does not teach a transfer device that moves in an out of contact with the drum.

Hamano et al. teaches a transfer device that moves in an out of contact with the drum (figure 5) and a waste toner storage container 232.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teaching of Hamano et al. with the image forming device of Sameshima et al. to reduce wear on the drum due to the transfer roller.

8. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sameshima et al. in view of Nonami. Sameshima et al. does not teach an eraser device.

Nonami teaches eraser device comprising a lamp and a light guide for use within an electrophotographic printer. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teaching of Nonami with the image forming device of Sameshima et al. to erase an image and increase image quality.

#### Prior Art

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shinohara and Miura et al. teach an intermediate transfer member located above a photoconductor.

Application/Control Number: 10/822,004 Page 5

Art Unit: 2852

## Allowable Subject Matter

10. Claims 6-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 19-24 are allowed.

## **Contact Information**

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quana M. Grainger whose telephone number is 571-272-2135. The examiner can normally be reached on 8am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur Grimley can be reached on 571-272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
